

WHAT DOCTORS, SCIENTISTS AND HOME ENVIRONMENTALISTS ARE SAYING ABOUT DR. DOORMAT

ENVIRONMENTAL EXPERTS

"A typical doormat becomes a growth site or reservoir for microbes and can contaminate the sole of a shoe prior to entering a home. Dr. Doormat effectively inhibits the growth of microbes on the surface of the doormat minimizing the transference of pollutants into the home, helping to support a healthy home environment." *Dr. Ernest Crutcher, Microbiologist Redmond, WA*

"Pre-school children, who ingest the most dust, have low body weight, and lack fully developed organs and immune and nervous systems are at the highest risk from dust and dirt track-in. Pollutants in carpet dust contribute to the total exposure of nearly all people, but especially to infants and toddlers. Soil sticks to the shoes, is carried into the house onto your floors and rugs, to the hands of a toddler and finally to their mouth. Wiping your shoes at least twice on Dr. Doormat and using an efficient vacuum cleaner can reduce dust levels in the rugs by 99%, or 100 times. These same procedures can reduce lead levels by 95%, or 20 times." *John Roberts, M.S., P.E., Home Environmental Expert Sammamish, WA*

"So many of my patients live in the suburbs and suffer from allergy problems and skin conditions caused by household dust, molds and other skin irritants. Dr. Doormat is an inexpensive and effective way to improve your home environment with little to no effort on the home owners part. What a terrific product." *Dr. David Green, MD, Dermatologist Bethesda, MD*

"We are enjoying the mats both at home and the clinic. Pets as well as their owners come in all day bringing their paws and shoe with all types of debris, chemicals, and germs. It's good to know that we have one more tool in our arsenal in the battle to keep the clinic as germ free as possible. We have two at the front door, side by side, and one at the employee's entrance. At home our mats are located at 4 different doors. It is like Old MacDonald's farm with 3 horses, 5 dogs, and 2 cats. I really enjoy the peace of mind that I have knowing that our floors are healthier because of Dr. Doormat." *Sherry & Dr. Bobby R. Zahn, DVM, Highlands Animal Clinic, Highlands, TX*

"Dr. Doormat is more effective than the average doormat in removing dirt and debris from the bottom of our shoes. I use it in my home." *Jeffrey C Philibert DVM DACVIM (O), New England Veterinary Oncology Group LLC*

"Dr. Doormat is a functional, durable product that I enjoy using in my own home." *Dr. Rachel Schreiber, Allergist, Rockville & Germantown, MD*
